

Computer Science Project

"Airline Management"

2022-2023

Submitted By:

Name-Aditya & Aben Binu

Class-XI-C

Roll No.- 4&5

Submitted To:

Mrs. Poonam Makhija

Index:-

1. Certificate
2. Acknowledgement
3. Introduction
4. Requirement Analysis And Design
5. Need For online Booking
6. Flow Chart
7. Programs Used
8. Hardware and Software Requirements
9. Installation Procedure
10. Future Scope
11. Conclusion
12. Bibliography

Name- Aben & Aditya
Class- XI-C
Roll No.4&5

Certificate

This is to certify that Aben Binu of XI-C

studying in Greenway Modern School has

successfully completed his Computer Science Project

On the Topic :-

"Airline Management"

Under my supervision and as per guidelines

issued by CBSE for the session

2022-2023

School Stamp:

Date

(Physically Signed)

Mrs.Poonam Makhija

(Computer Science Teacher)

Physically Signed

Teacher's Signature

Acknowledgement

Apart from the efforts of me the success of any project depends largely on the encouragement and guidance of many others. I take this opportunity to express my gratitude to the people who have been instrumental in the successful completion of this project.

I express deep sense of gratitude to almighty God for giving me strength for the successful completion of the project.

I express my heartfelt gratitude to my parents for the constant encouragement while carrying out this project.

I express my deep sense of gratitude to the luminary **The Principal , Greenway Modern School** has been continuously motivating and extending their helping hand to us.

My sincere thanks to **Mrs.Poonam Makhija** Teacher,In-charge, A guide , Mentor all the above a friend, who critically reviewed my project and helped in solving each and every problem occurred during implementation of the project.

This Guidance and support received from all the members who contributed and who are contributing to this project was vital for the success of the project. I am grateful for their constant support and help

Introduction

An airline is a company that provides air transport services for traveling passengers and freight. Airlines use aircraft to supply these services and may form partnerships or alliances with other airlines for codeshare agreements, in which they both offer and operate the same flight. Generally, airline companies are recognized with an air operating certificate or license issued by a governmental aviation body. Airlines may be scheduled or charter operators.

Our software will perform all the particular tasks that the user expects from a airline online interface

Our motto is to develop a extensive use software for bulk management of customer data, managing airlines for various purposes.

Our software is capable of collecting information from the user and using it for booking , boarding pass generation, cancellation, creation of Login-ID, etc

Hereby our main objective is customer satisfaction for which we have developed a user friendly interface knowing the need for management of customer data in this modern era of technology

Name- Aben & Aditya
Class- XI-C
Roll No.4&5

Requirement Analysis And Design of the project :-

The key question is what is the need of an online booking or what is the significance of this Airline management system ?

- The major answer to this question is earlier we need to go directly to airports or visit travel agencies for booking which increased reporting of fraud agencies which scammed people. Due to which there was a need for people becoming independent for booking flights directly by connecting to the airline server So on seeing the above concerns we have developed this project so all these problems can be nullified

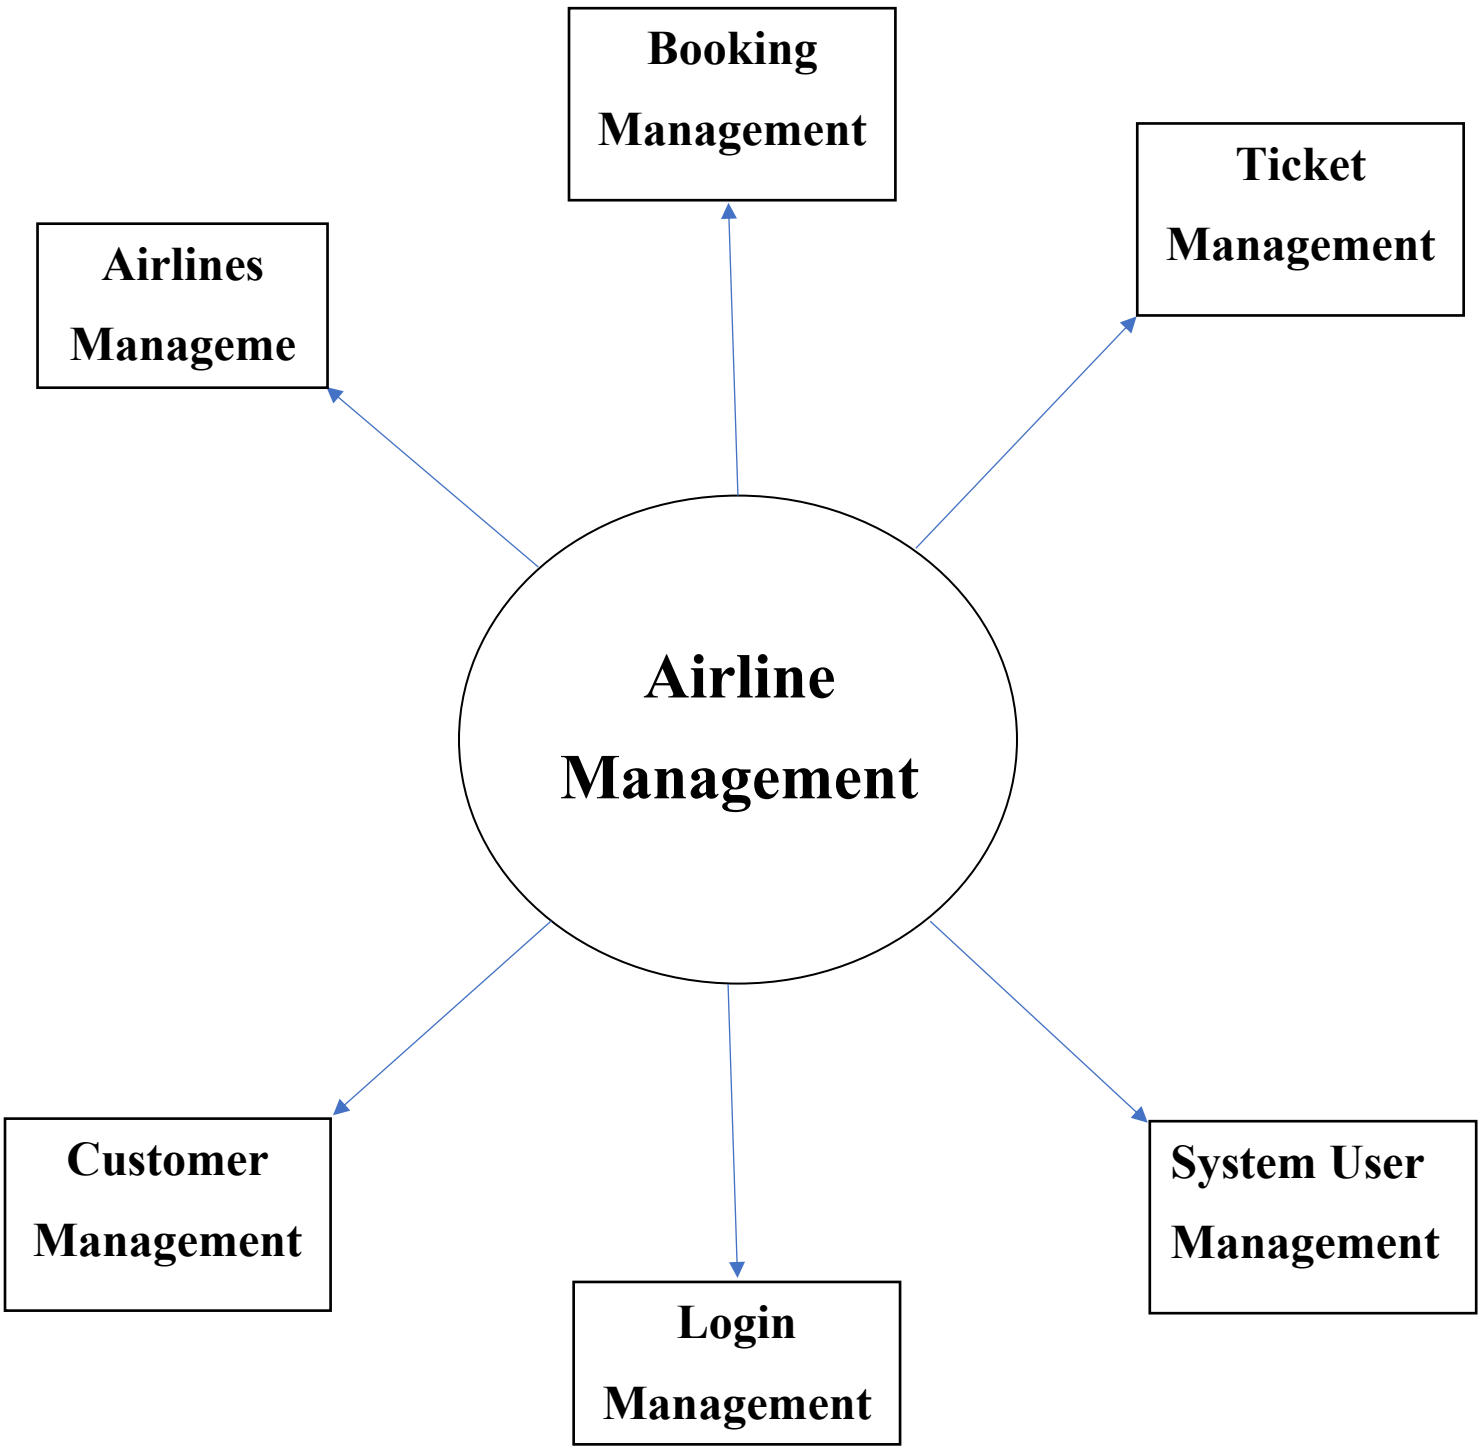

Market Requirements:-

- ✓ Our Program has the capacity to handle the bulk customer data regarding their journey , identity details , log in details, destination, time of flight, date , etc .

- ✓ Also our program has the capability of enabling users for web checkin so that users can directly board the flight on the day of journey.

Class- XI-C
Roll No.4&5

Explanation:

1. Desk Officer:-

Their responsibility is to create reservations , assign seat to passenger, search Flights, Add Passenger, maintain user account details

2. Airline Administrator:-

Their Task is to add/modify server , chart fight details and timings, Change details of the journeys. Flight control administrators manage the dispatching of flight schedules and controls enroute flight movements based on FAA (Federal Aviation Administration) rules.

3. Customer:-

Here the customer inputs their details regarding their journey / Login from their account/ Sign up. They can find details of various flights flying to their desired destination according to their choice.

Class- XI-C
Roll No.4&5

Functions Used In The Project :-

- if
- elif
- else
- strings
- dictionary
- list
- tuple
- random
- global
- user defined functions
- while/for loop
- range

Name- Aben & Aditya
Class- XI-C
Roll No.4&5

Hardware And Software Requirements

1. **Operating system:** windows 7 and above
2. **Processor:** 11th Gen Intel(R) Core(TM) i3-1155G7 @ 2.50GHz 2.50 GHz and above
3. **Motherboard:** 1.845 or 915.995 for Pentium or MSI

   K9MM-V VIAK8M800+8237R Plus Chipset For AMD ATHALON
4. **Ram:** 512 mb+
5. **Hard Disk:** SATA 40 GB or above
6. **CD/DVD r/w multi drive combo:** (If backup Required)
7. **Floppy Disk: 1.44 mb:** (If backup Required)
8. **Monitor:** 14.1 or 15-17 inch
9. **Key board and Mouse**
10. **Printer:** (If print Required)

Software Requirements:

- Windows./Linux/macOS
- Python

Name- Aben & Aditya
Class- XI-C
Roll No.4&5

Future Scope:-

- Increased operational efficiency and productivity
- Feasible codes to handle
- Capabale to handle large scale data of passengers
- Superior customer service
- Provides Attractive user interface for increasing Airline Growth

Name- Aben & Aditya
Class- XI-C
Roll No.4&5
